	Industrial applicability (IA)	Claims	1 - 18	<u> </u>	·	·- <u></u> -	YES
		Claims	none				NO
l		Ciamis					

2. Citations and explanations (Rule 70.7)

The present invention relates to a diagnosis system and method with real-time data verification, including an inserting catheter, a data detecting section with pressure sensors, and a control unit.

Reference is made to the following documents from the international search report.

·· D1 · US 4538621 A

D2: US 5385563 A

D3: US 5331548 A D4: US 5427114 A

D1 discloses a urodynamic catheter with lumens.

D2 discloses a urodynamic catheter with pressure-sensing lumens.

D3 discloses a computerized urological diagnostic method and system.

D4 discloses an apparatus for determining pressure at one or a number of intermediate points along a catheter inserted into a closed cavity.

None of the above documents anticipates the inventions disclosed in independent claims 1, 11, 15.

Also, none of them makes it obvious to a person skilled in the art to apply real-time data verification or a data detecting means with pressure sensors for a diagnosis system with a catheter.

Accordingly the subject matter of claims 1 through 18 appears to be novel, and involve an inventive step. (Article 33(2) and 33(3) PCT)

The industrial applicability of the subject matter of claims 1 through 18 is self-evident. (Article 33(4) PCT)
